DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Indefinite language in claims 1, 12, 13 and 14, in phrase "in particular" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-16 and are rejected under 35 U.S.C. 102(b) as being anticipated by Miyake et al. US # 4,954,762.

With respect to claim 1, Miyake et al. disclose method for control of industrial robot working point. Miyake et al. show in Fig. 1 and Fig. 10:

- A multi-joint robot 1 with multiple axis having six freedoms;
- A welding torch 3, serving as a working tool fixed to robot 1, (that reads on applicant's "final control element".
- An object 5 located on a movable conveyer 91;
- A visual sensor 92 operatively connected to processor 69, providing an input for robot 1 control apparatus 6, (see Fig. 2);
- A range of robot 1 motion is detected via inputs from visual sensor 93, (shown in Fig. 10);
- The recorded images analyzed via a microprocessor 61, shown in Fig.2 that is operatively connected with memory 62 and auxiliary memory 63;

Miyake et al. teach coordinate systems conversion between universal coordinate systems, conveyor coordinate system, visual sensor coordinate system, tool coordinate system and working point visual sensor coordinate system. Miyake et al. disclose calculation of movement command based on deviation between the position in executing work and the position in teaching work that is detected by visual sensors, (see col. 5, lines 9-52, col. 15, lines 64-68 and col. 16, lines 1-68).

Miyake et al. teach repeating of the steps for performing "playback operation", (see col. 7, lines 67, 68, col. 8, lines 1-18).
